## OBJECTIVE

- Seeking an internship in Mobile, Autonomous, and Robotic Systems to leverage my industry experience in engineering and project management alongside my academic knowledge in AI, Robotics, and Control Systems.
- I am particularly interested in contributing to and advancing the state-of-the-art in Autonomous systems.

## SUMMARY

### Key Skills:

- Technical Skills:
  - **ASPICE:** Applied ASPICE processes including requirement analysis, system qualification test, and software qualification test.
  - **Test Case Design:** Developed comprehensive test cases encompassing static, dynamic, positive, negative, and combination scenarios.
  - **Software Design Techniques:** Utilized state transition diagram, sequence diagram, and timing diagram for issue analysis and reporting.
- Soft Skills:
  - **Problem-solving:** Skilled at identifying and resolving complex issues throughout projects.
  - **Risk Management:** Adept at identifying and mitigating risks to ensure project success.
  - **Leadership:** Demonstrated leadership in guiding teams towards project success.
  - **Negotiation:** Proficient in negotiating with stakeholders to achieve project objectives.
  - **Active Listening:** Ability to listen attentively to team members and stakeholders to understand their perspectives.
  - **Team Motivation:** Experienced in motivating and inspiring teams to achieve their goals.
  - **Conflict Resolution:** Proficient in resolving conflicts and fostering positive team dynamics.

### Language Proficiency:

- **English:** Fluent (Reading, Writing, Speaking)
- **Japanese:** Advanced Proficiency (Reading, Writing, Speaking)
- **Vietnamese:** Native Speaker (Reading, Writing, Speaking)
- **French:** Beginner (Reading, Writing, Speaking)

Expertise Highlights:

- Proven track record in ASPICE-compliant environments.
- Profound experience in developing diverse test cases.
- Advanced proficiency in software design techniques for issue analysis and reporting.

Experience Snapshot:

- 5+ years in software and automotive sectors.
- Specializing in project management, business analysis, and test coordination.
- Profound understanding of cultural intricacies in Vietnam, Japan, and the USA.
- Demonstrated ability to spearhead projects for seamless execution and high-quality software product delivery.

Ideal Candidate Profile:

- Proficient in understanding project objectives and technical requirements, particularly for Autonomous systems
- Equipped with strong management, communication, and analytical skills, capable of excelling in both leadership and collaborative roles
- Adept at aligning team efforts to achieve shared goals in both academic and industry settings

**TECHNICAL SKILLS:**

- **Programming Language:** C++, Python, MATLAB, Objective-C
- **Software Test Tools:** DSpace, Vector VT, Vector CANoe, CANalyzer
- **Other Software Proficiency:** UC-Win/Road: Proficient in using UC-Win/Road for road design, simulation, and visualization in transportation engineering projects.
- **Modeling Tools:** MS Visio, UML, Draw.io
- **Requirement Mgmt. Tools:** Jama, HP ALM
- **SDLC Methodologies:** Agile and Waterfall Technologies
- **Change Mgmt. Tool:** Jira, Confluence, Azure DevOps
- **Bug Tracking:** Bugzilla, Jira, Rally
- **Database:** MSSQL, MySQL

**EDUCATION**

- |                                                                                                     |             |
|-----------------------------------------------------------------------------------------------------|-------------|
| • <b>Grenoble INP – Master in Mobile, Autonomous and Robotic Systems</b>                            | 2024 - 2025 |
| • <b>Japanese Language School of Tokyo - Japanese Training</b>                                      | 2015 - 2016 |
| • <b>Da Nang University of Science and Technology - B.Sc. in Electronics and Telecommunications</b> | 2008 - 2013 |

**WORKING EXPERIENCE HIGHLIGHTS**

**3/2023 – 3/2024**

**Account Manager**

## **FPT USA, Michigan, US**

*Project: Development of AI Chatbot for CAD API • Development of AI Model for Intelligent Inspection System • Development of Material Control App • Development of Instrument Clusters and Head-Up Displays • and more*

### **Responsibility:**

- Orchestrated cross-functional collaboration among sales, engineering, and IT teams to deliver customized solutions, resulting in a 70% increase in client satisfaction.
- Served as the crucial link between clients and engineering experts, streamlining communication, and reducing project misalignments by 5%.
- Keep abreast of industry trends and emerging technologies, sharing valuable insights with both clients and internal teams to guide product development and enhancement strategies.
- Provide bilingual support to Japanese-speaking clients, facilitating seamless communication and understanding.
- Collaborate closely with our IT and engineering departments to guarantee the seamless integration of IT DX solutions, actively participating in the technical aspects of project implementation.
- Steer the management of a diverse array of projects, including those focused on IVI vehicles and AI solutions for manufacturing, ensuring comprehensive oversight of the end-to-end delivery process with teams ranging from 10 to 15 individuals.

**1/2022 – 3/2023**

## **Customer Success Manager**

## **FPT Canada, Ontario, Canada**

*Project: Development for Smart Integration Multifunction Printer*

### **Project Description:**

Develop software for multifunction printers (MFPs) integrating advanced technology for enhanced document processing, management, and automation capabilities. The project will prioritize improving user interface usability while ensuring compatibility and scalability across various business environments.

### **Responsibility:**

- Engage with customers to understand their unique needs and challenges, providing tailored solutions through the app.
- Guide customers through step-by-step processes within the app, ensuring a seamless user experience.
- Collaborate with customers to create custom scenarios within the app, demonstrating its functionality and addressing specific use cases.
- Utilize the app's features to troubleshoot customer issues in real-time, offering immediate assistance and resolution.
- Provide in-depth training sessions to educate customers on maximizing the app's potential and optimizing their workflows.
- Act as a liaison between customers and the development team, advocating for customer needs and contributing to product roadmap discussions.

**2/2021 – 12/2021**

**Project Manager**

**Panasonic ITS, Japan**

*Project: HMI (Human Machine Interface) Development for Car Navigation System (21CY)*

**Project Description:**

Develop of an advanced navigation system for all of ECU in Car to test Head Unit with different Car makers. The application requires sending and receiving CAN commands, logging its output and enhancing the user interface of the SW architecture. Design and validate functions in detail for each SW release and implementation schedule.

**Responsibility:**

- Customer requirements definition, analysis, and discussion.
- Build and maintain trusted relationships with clients and all stakeholders.
- Take charge of new function and maintenance development in service.
- Develop detailed project plans to monitor and track progress.
- Lead and project management, ensuring on-time and within scope delivers.
- Report and escalate to management as needed.
- Technical support (design, development, operation, and testing) with local engineers
- Source code review.
- Scrum task and issue management (RTC/lychee).

**5/2017 – 1/2021**

**System Engineer**

**Nissan Motor Corporation, Japan**

*Project: Vehicle Experiments · AD & ADAS Performance Testing*

**Project Description:**

Coordinate and design a broad range of tasks to perform testing of advanced driver assistance systems. Optimize performance while reducing costs by researching relevant components based on customer needs. Effectively managing international teams and their schedules is fundamental for the success of the project.

**Responsibility:**

- Translate client's needs into detailed business requirements documents.
- Test environment setup and verification (including circuit tests).
- Environment evaluation (e.g., soldering, creating electronic circuits).
- Verification of automobile products (such as sensors and meters) using MATLAB and circuit diagrams.
- Evaluate and experiment with the reliability of the ADAS HILS controller function (ITS functions)
- Write test plans and test cases (static, dynamic, positive, negative, and combination test cases).
- Analyze signals of functions using CAN-Analyzer/CANoe etc.
- Report and fix defects/errors that occurred during testing.

- Deploy **automation test** on the individual modules using Python.
- Analyze and find solutions when testing vehicles in real-life conditions.
- Utilized UC-Win/Road for simulating, visualizing, and testing road designs in transportation engineering.
- Handle various measuring instruments.

**10/2016 – 4/2017**

**System Engineer**

**Hitachi Network Service Company, Japan**

*Project: Server kitting (Windows Server 2012R2 construction & test)*

**Project Description:**

Manage a team of engineers to install and setup various applications at Hitachi's logistics centers. For each application, it is required to gather requirements from each stakeholder and ensure meeting them through close supervision of the development team.

**Responsibility:**

- Coordinated with system partners to finalize designs and confirm requirements.
- Responsible for creating PFD's Process Flow Diagrams using MS Visio.
- Responsible for requirements meetings, gathering requirements and obtaining sign-off from the Stakeholders.
- Worked closely with the Project Manager for maintenance releases, risk analysis, defining the scope of projects, assigning work to the development team.

**8/2013– 6/2015**

**QA Engineer**

**FPT Corporation – HCM Branch, Vietnam**

*Project: Testing Sony NFC / Felica card application*

**Project Description:**

Develop an application to test a variety of cards across several card reading systems. The resulting system needs to be robust over different axes, including high temperatures, vibration, and humidity. The evaluation software needs to work across different operating systems.

**Responsibility:**

- Setting up evaluation environments (Windows, Linux, Virtual Machine).
- Writing and reviewing testing plans and fixing bugs.
- Testing card reader types (Wireless, Wireline) with a variety of cards (Pasmo, Suica, etc.).
- Performing stress tests to high temperature, vibration, and humidity.
